

## Johns Hopkins University Research Software Support Network

Needs Analysis: Research Software Engineer Survey Invitation

The [Open Source Programs Office](#) at JHU is working to create a research software support network connecting research software engineers and researchers who develop software with essential support services across the University.

To ensure the network meets the needs of our community, we're conducting a needs analysis and inviting Research Software Engineers (RSEs) to participate in a brief survey. **For this survey, we're looking to gather feedback from full-time software engineers writing code to solve research problems.** Future iterations of this survey will target researchers who develop software.

Survey link: [Enter your link here]

As many RSEs don't have "Research Software Engineer" in their job title, they can be challenging to identify across campus. If you are not involved in research software engineering work, please feel free to disregard this survey. However, if you have colleagues who are full-time software engineers supporting research - regardless of title - we would greatly appreciate you forwarding this survey to them.

Thank you for your input in shaping this initiative.

Best regards,

Megan Forbes
